RAJDIP SENGUPTA

Senior Product Manager | Enterprise Automation, AI Agents and Incident Management

Bengaluru, India | +91 93040 20972 | rajdip.sengupta17@iimranchi.ac.in | linkedin.com/in/rajdip-sengupta-a1664182

SUMMARY

Senior Product Manager with 10+ years across product management, technology consulting and software engineering, building enterprise automation, agentic AI and incident management products at Blibli and Flipkart. Ships AI with human-in-the-loop guardrails and measured results: an AI incident agent that resolves 54% of incidents on its own and improved SLA turnaround 44%, a self-help portal that cut production issue tickets by a third, and ML replenishment that cut out-of-stocks 24%. Leads program teams of up to 15, influences executive stakeholders, and mentors 2 Product Managers and 2 Product Analysts. Certified in AI Strategy and Governance (University of Pennsylvania, 2026).

CORE SKILLS

AI and Automation: Agentic Workflows, AI Agents, Intelligent Automation, AI Use-case Selection, Evaluation Design, Responsible AI, Human-in-the-loop, Guardrails, Error Handling, AI Governance, ML Productization, Claude Code, Claude Skills

Incident Management: Intake, Triage, Severity Classification, Workflow Orchestration, Escalation, Auto-assignment, Root Cause Analysis, Incident Communications, Trend Tracking, Monitoring, Observability, Issue Resolution

Product: Product Strategy, Roadmaps, Portfolio Prioritization, Capacity Planning, Discovery, Business Cases, PRDs, User Stories, OKRs, Release Planning, Dependency Management, Agile, Scrum, User-centric Design

Leadership: Cross-functional Leadership, Executive Stakeholder Management, Stakeholder Communications, Mentoring, Product Management Standards

Data and Platforms: SQL, A/B Testing, KPIs, Dashboards, APIs, ERP Integration, CRM, Customer Data Platform, Warehouse Management System, Jira, Confluence, GitHub

Risk and Compliance: Operational Risk, SOX, ISO 27001, Cybersecurity Risk Assessment, Payment Flows

PROFESSIONAL EXPERIENCE

Lead Product Manager | Blibli (Blibli.com) | Bengaluru, India **Oct 2022 – Present**

- Improved incident SLA turnaround 44% (April to October 2026) with agentic AI workflows that triage ~80 Jira incidents a month, rank similar past tickets with a weighted scoring rubric and suggest the likely root cause; the agent resolves 54% of incidents without a person, with 82% positive feedback across 488 rated root-cause analyses.
- Built an AI agent that classifies incident severity as Critical, Medium or Trivial from the description and historical tickets; 78% of its classifications are accepted unchanged.
- Led AI use-case selection and responsible AI design: weighted the rubric toward exact error strings and confirmed root causes to cut false matches, routed low-confidence incidents to a person, and required approval for every data correction; secured executive funding by prototyping the workflow in Claude Code and demoing a hosted version.
- Reduced production issue tickets from 120 to 80 a month by launching a self-help correction portal with role-based approvals and full audit history.
- Strengthened incident observability with a trend tracking dashboard, and own incident stakeholder communications for internal teams, leadership, clients and customers.
- Cut dock-to-stock time 42% and improved outbound SLA 12% in dark stores by leading a WMS mobility platform across 3 business models with a 9-person team (96% of workflows on mobile, ~300 users); led a 15-person grocery and fresh program that won a client with a USD 4M+ annual contract.
- Cut out-of-stocks on customer-searched SKUs 24% and raised outbound SLA from 93.6% to 97.2% across 8 warehouses by launching ML demand forecasting with Data Science, with human approval before each replenishment.
- Increased fulfillment capacity 5x (2,000 to 10,000 order items per hour) by delivering conveyor belt integration, owning release planning and cross-team dependencies; saved 16.8B IDR a year in licensing costs through omnichannel enablement.
- Lifted click-through rate 9.8% (relative) and conversion from 0% to 0.33% ($p = 0.015$) by A/B testing an omnichannel recommendation product.

- Raised team delivery standards by running capacity planning for 2 PMs and 2 Product Analysts, setting the team PRD template and building a reusable Claude skill that applies it.

Product Manager – Warehouse Management System | Flipkart | Bengaluru, India **May 2021 – Oct 2022**

- Improved picking efficiency 20% (order items picked per hour) across 16+ fulfillment centers by co-designing inventory placement algorithms with Data Science.
- Grew self-serve inventory dashboards to 500+ active internal users by iterating on post-launch feedback from warehouse and operations teams.
- Saved 16 hours of manual effort per week by replacing a manual SOX audit workflow with a compliance dashboard.

Product Consultant | KPMG India | Kolkata, India **May 2019 – May 2021**

- Reduced compliance costs 30% (audit effort, tool licenses and staffing) for 8 organizations by implementing ISO 27001 and SOX control frameworks.
- Turned IT maturity and cybersecurity risk assessments for 8 government departments into phased technology roadmaps.
- Managed and mentored a team of 3 (1 Senior Analyst, 2 Analysts); delivered Fortune 100 client releases with 2 or fewer high-impact UAT issues.

Software Development Engineer | IBM | Bengaluru, India **Aug 2014 – May 2017**

- Built and shipped iOS applications and backend services for enterprise clients.

EDUCATION

Master of Business Administration (MBA), Indian Institute of Management Ranchi 2017 – 2019

Bachelor of Technology, Computer Science and Engineering, West Bengal University of Technology 2010 – 2014
